Comorbidities & Erectile Dysfunction

Research has reported that among men with ED, approximately 40% have hypertension; 42% have hyperlipidemia; and 20% have diabetes¹.

Erectile dysfunction (ED) is highly prevalent affecting at least 50 % of men with diabetes mellitus (DM). DM may cause ED through a number of pathophysiological pathways.²

Erectile dysfunction (ED) is a major concern in heart failure (HF) due its high prevalence as well as its negative impact on the quality of life, this condition being usually unrecognized and thus untreated

One Product For All Conditions

(Quebrachine) Several studies have reported promising results of Quebrachine as a natural PDES inhibitor thus helping in erectile dysfunction (ED). ⁴	(Tribulus terrestris) Several studies have reported promising results of Quebrachine as a natural PDES inhibitor thus helping in erectile dysfunction (ED). ⁴	(Crocus sativus) Several studies have reported promising results of Quebrachine as a natural PDES inhibitor thus helping in erectile dysfunction (ED). ⁴
